

Interactive Task Manager

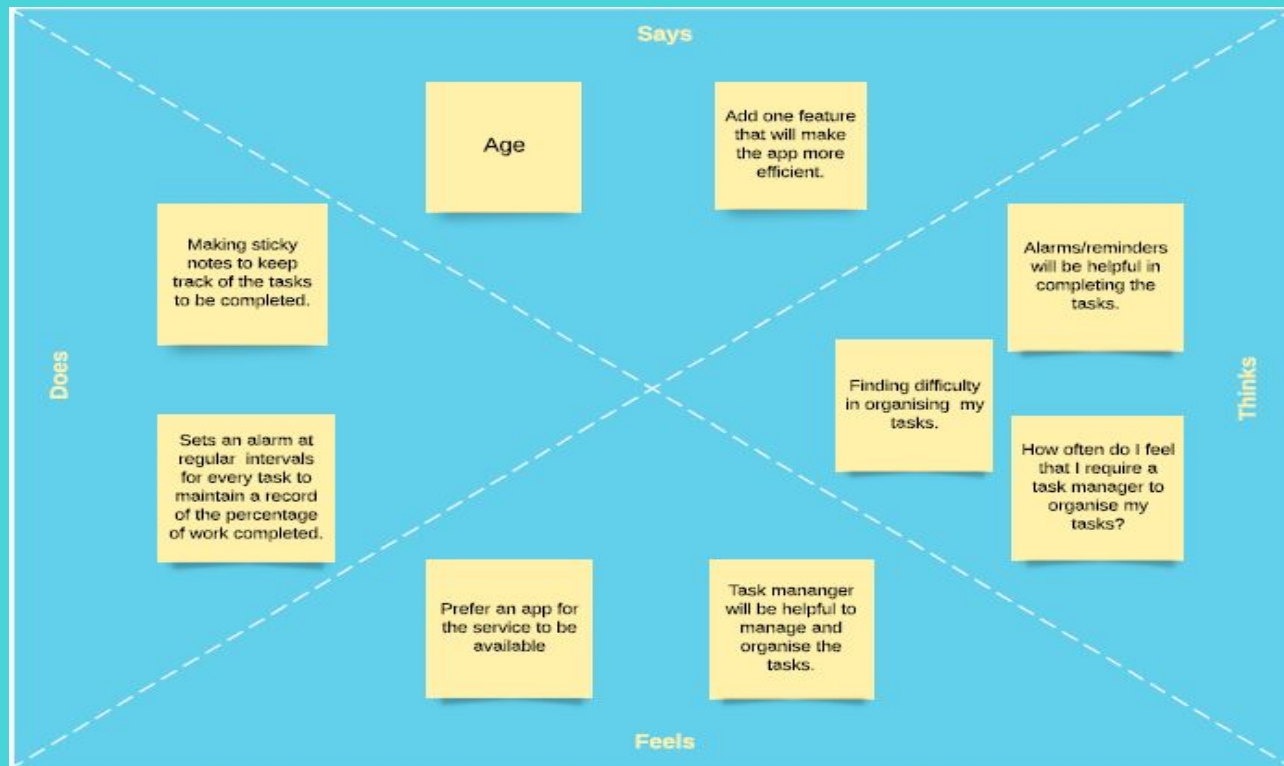

Problem statement

- People often find it difficult to manage and organise their daily tasks. To make it easy for them to organise and plan all the tasks effectively this application is very helpful.
- Interactive Task Manager provides the facility to schedule and keep track of the tasks to be performed by the user.
- The user will have to schedule the list of all the tasks to be done. The application sets an alarm to remind the user to complete the specified task during that specific time.

Need finding

- We conducted a survey and got around 60 responses from various age groups.
- Around 57% are finding it difficult in managing their tasks.
- We also asked them if a task manager would help them solve their problem and 58% of them responded Yes and 40% of them responded Maybe.

Empathy Map

Heuristic Evaluation

1. Consistency and Standards :

Language and error messaging is consistent across the application .The menu button is designed towards the left following the general trend.

2. User control and Freedom :

The user can easily exit the application at any point of time.

Familiar icons have been designed to let users to apply their knowledge from one click to to the other one.

It gives users the sense that they are in full control of the events occurring in the digital space with easy navigation throughout the application.

3. Help and Documentation :

The application is simple to use that help and documentation is not necessary, however the user interface type presents user with sequence of dialog boxes that lead user with series of well defined steps .

THANK YOU.
